

Amendments to the Claims:

1. (Currently Amended) A method comprising:  
accessing an electronic programming guide, the electronic programming guide listing a plurality of scheduled broadcast programs and comprising information associated with each of the plurality of scheduled broadcast programs;  
displaying the accessed electronic programming guide on the electronic display;  
selecting at least one of the plurality of scheduled broadcast programs in the accessed electronic programming guide, ~~and thereby transferring information, associated with the at least one selected broadcast program, to an electronic calendar as at least one new broadcast event entry, each new broadcast event entry containing the information for a corresponding selected broadcast program and being stored in the electronic calendar at a time corresponding to a broadcast time of the respective at least one selected broadcast program; and~~  
visually associating in the electronic program guide a user identifier with the at least one of the plurality of scheduled broadcast programs selected in the accessed electronic program guide new broadcast event entry.
2. (Previously Presented) The method of claim 38, wherein at least a portion of the displayed electronic calendar is replaced on the display by the electronic programming guide when the electronic program guide is accessed, and the electronic programming guide is removed from the display upon selection of the at least one of the plurality of broadcast programs.
3. (Original) The method of claim 1, wherein the scheduled broadcast programs listed in the electronic programming guide are television programs.

4. (Currently Amended) The method of claim 38, wherein the scheduled broadcast programs listed in the electronic programming guide are television programs, and wherein the information transferred from the electronic programming guide to the electronic calendar comprises at least one of a name, start time, duration, and channel number of the corresponding at least one selected television program.

5. (Currently Amended) The method of claim 38 [[1]], wherein the information transferred comprises an identification of the at least one selected broadcast program.

6. (Currently Amended) The method of claim 38 [[1]], further comprising displaying one of a reminder and recording icon in the electronic calendar when a broadcast program for which a broadcast event entry has been stored in the electronic calendar is tagged for one of a reminder and a recording function, respectively.

7. (Previously Presented) The method of claim 6, wherein the broadcast program for which a broadcast event entry has been stored in the electronic calendar is tagged in the electronic programming guide for one of a reminder and a recording function, respectively.

8. (Previously Presented) The method of claim 1, wherein the selecting at least one of the plurality of scheduled broadcast programs in the accessed electronic programming guide comprises entering a code for a selected program, the code uniquely identifying the selected program.

9. (Original) The method of claim 1, wherein the step of selecting at least one of the plurality of scheduled broadcast programs in the accessed electronic programming guide comprises highlighting a listing in the accessed electronic programming guide corresponding to the at least one selected program.

10. (Currently Amended) A method comprising:  
accessing an electronic calendar capable of storing a plurality of event entries at a plurality of times;  
displaying the accessed electronic calendar on an electronic display;  
entering a code for a selected broadcast program, the code uniquely identifying the selected program;  
processing the entered code to determine information associated with the selected broadcast program;  
transferring the information to the accessed electronic calendar as a new broadcast event entry containing the information for the selected broadcast program and being stored in the electronic calendar at a time corresponding to a broadcast time of the selected broadcast program; and  
visually associating in the electronic calendar a user identifier with the at least one new broadcast event entry.

11. (Original) The method of claim 10, wherein the selected broadcast program is a television program.

12. (Previously Presented) The method of claim 10, wherein the information transferred to the electronic calendar comprises at least one of a name, start time, duration, and channel number of the corresponding at least one selected broadcast program.

13. (Previously Presented) The method of claim 10, further comprising displaying one of a reminder and recording icon in the electronic calendar when a broadcast program for which a broadcast event entry has been stored in the electronic calendar is tagged for one of a reminder and a recording function, respectively.

14. (Previously Presented) The method of claim 13, wherein the broadcast program for which a broadcast event entry has been stored in the electronic calendar is tagged in the electronic programming guide for one of a reminder and a recording function, respectively.

15. (Currently Amended) An apparatus comprising:  
~~a data storage device in which is stored an electronic calendar capable of storing a plurality of event entries at a plurality of times;~~  
~~a first accessing component configured to access the electronic calendar stored in said data storage device;~~  
an ~~second~~ accessing component configured to access an electronic programming guide listing a plurality of scheduled broadcast programs, the electronic programming guide comprising information associated with each of the plurality of scheduled broadcast programs;  
and  
a processor coupled to said ~~first and second~~ accessing component[[s]] ~~and said data storage device~~, said processor being configured, upon receipt of a control signal, for selecting at least one scheduled program in the accessed electronic programming guide, ~~and thereby transferring information associated with the at least one selected broadcast program from the electronic programming guide to the accessed electronic calendar as at least one new broadcast event entry, the at least one new broadcast event entry containing the information for the selected broadcast program and being stored in the electronic calendar stored in said data storage device at a time corresponding to a broadcast time of the at least one selected broadcast program,~~  
wherein said processor is further configured to visually associate in the electronic program guide a user identifier with the at least one scheduled program selected in the accessed electronic programming guide ~~new broadcast event entry~~.

16. (Currently Amended) The apparatus of claim ~~42~~15, further comprising an output component configured to generate a video output signal capable of driving a monitor, the video output signal being capable of displaying on the monitor the electronic calendar and the electronic programming guide.

17. (Previously Presented) The apparatus of claim 16, wherein the video output signal is such that at least a portion of the electronic calendar when displayed is replaced by the electronic programming guide when the electronic programming guide is accessed, and the electronic programming guide when displayed is removed upon selection of a broadcast program.

18. (Previously Presented) The apparatus of claim 15, wherein the scheduled broadcast programs listed in the electronic programming guide are television programs.

19. (Currently Amended) The apparatus of claim ~~42~~18, wherein the scheduled broadcast programs listed in the electronic programming guide are television programs, and wherein the information transferred from the electronic programming guide to the electronic calendar comprises at least one of a name, start time, duration, and channel number of the selected television program.

20. (Currently Amended) The apparatus of claim ~~42~~15, wherein the information transferred comprises an identification of the at least one selected broadcast program.

21. (Currently Amended) The apparatus of claim ~~42~~15, wherein said processor is capable of displaying one of a reminder icon and a recording icon in the electronic calendar when a broadcast program for which a broadcast event entry has been stored in the electronic calendar is tagged for one of a reminder and a recording function, respectively.

22. (Previously Presented) The apparatus of claim 21, wherein the broadcast program for which a broadcast event entry has been stored in the electronic calendar is tagged in the electronic programming guide for one of a reminder and a recording function, respectively.

23. (Previously Presented) The apparatus of claim 15, wherein the selecting at least one of the plurality of scheduled broadcast programs in the accessed electronic programming guide comprises processing an entered code to ascertain a broadcast program uniquely corresponding to the entered code.

24. (Previously Presented) The apparatus of claim 15, wherein the selecting at least one of the plurality of scheduled broadcast programs in the accessed electronic programming guide comprises highlighting a listing in the accessed electronic programming guide corresponding to the at least one selected program.

25. (Currently Amended) An apparatus comprising:  
~~data storage means for storing an electronic calendar capable of storing a plurality of event entries at a plurality of times;~~  
~~first accessing means for accessing the electronic calendar stored in said data storage means;~~  
second accessing means for accessing an electronic programming guide listing a plurality of scheduled broadcast programs, the electronic programming guide comprising information associated with each of the plurality of scheduled broadcast programs; and  
processing means coupled to said ~~first and second~~ accessing means and ~~said data storage means~~ for selecting, upon receipt of a control signal at least one scheduled program in the accessed electronic programming guide, ~~and thereby transferring information associated with the at least one selected broadcast program from the electronic programming guide to the accessed electronic calendar as a new broadcast event entry, the new broadcast event entry containing the information for the selected broadcast program and being stored in the electronic calendar stored in said data storage means at a time corresponding to a broadcast time of the selected broadcast program,~~  
wherein said processing means is further configured to visually associate in the electronic program guide a user identifier with the at least one scheduled program selected in the accessed electronic programming guide ~~new broadcast event entry.~~

26. (Previously Presented) The apparatus of claim 25, wherein the selected broadcast program is a television program.

27. (Currently Amended) The apparatus of claim ~~43~~25, wherein the information transferred to the electronic calendar comprises at least one of a name, start time, duration, and channel number of the corresponding at least one selected broadcast program.

28. (Currently Amended) The apparatus of claim ~~43~~25, wherein said processing means is configured to display one of a reminder signal and a recording icon in the electronic calendar when a broadcast program for which a broadcast event entry has been stored in the electronic calendar is tagged for one of a reminder and a recording function, respectively.

29. (Previously Presented) The apparatus of claim 28, wherein the broadcast program for which broadcast event entry has been stored in the electronic calendar is tagged in the electronic programming guide for one of a reminder and a recording function, respectively.

30. (Currently Amended) The method of claim ~~41~~, wherein accessing the electronic programming guide comprises accessing the electronic programming guide from the electronic calendar by selecting an icon associated with the displayed electronic calendar.

31. (Currently Amended) The apparatus of claim ~~42~~15, wherein the second accessing means is further configured to access the electronic programming guide from the electronic calendar.

32. (Currently Amended) The method of claim 1, wherein the electronic calendar is configured to store event entries for a plurality of users,  
wherein said selecting at least one of the plurality of scheduled broadcast programs in the accessed electronic programming guide includes selecting a plurality of scheduled broadcast

programs respectively associated with multiple users and ~~thereby transferring information~~  
~~respectively associated with each of the plurality of selected broadcast programs to an electronic~~  
~~calendar as multiple new broadcast event entries~~, and

wherein said visually associating a user identifier in the electronic programming guide  
with the at least one of the plurality of scheduled broadcast programs selected in the accessed  
electronic program guide new broadcast event entry includes visually associating in the  
electronic programming guide respective user identifiers with corresponding ones of the plurality  
of scheduled broadcast programs multiple new broadcast event entries.

33. (Currently Amended) The apparatus of claim 15, wherein the processor  
~~electronic calendar~~ is configured to select a plurality of scheduled broadcast programs  
respectively associated with store event entries for a plurality of users, and wherein the processor  
is further configured to visually associate in the electronic program guide respective user  
identifiers with corresponding ones of the plurality of scheduled programs selected in the  
accessed electronic programming guide store respective user information with each of multiple  
~~event entries in the electronic calendar~~, the respective user identifiers information providing an  
indication of a respective one of the plurality of users with which each of the plurality of  
scheduled programs event entry is associated.

34-35. (Canceled)

36. (Currently Amended) The method of claim 1, wherein said visually associating in  
the electronic program guide the user identifier with the at least one of the plurality of scheduled  
broadcast programs selected in the accessed electronic program guide new broadcast event entry  
includes automatically visually associating in the electronic program guide a user identifier with  
at least one of the plurality of scheduled broadcast programs selected in the accessed electronic  
program guide new broadcast event entry.

37. (Currently Amended) The method of claim 41, wherein said selecting at least one of the plurality of scheduled broadcast programs in the accessed electronic programming guide, and thereby transferring information to an electronic calendar as at least one new broadcast event entry includes selecting at least one of the plurality of scheduled broadcast programs in the accessed electronic programming guide, and thereby transferring information as at least one new broadcast event entry to an electronic calendar that is integrated with the electronic programming guide.

38. (Currently Amended) The method of claim 41, further comprising:  
accessing the electronic calendar, the electronic calendar being capable of storing a plurality of event entries at a plurality of times and configured to store broadcast event entries related to scheduled broadcast programs and user-generated event entries related to scheduled non-broadcast-related events for at least one user; and  
displaying the accessed electronic calendar on an electronic display.

39. (Previously Presented) The method of Claim 10, wherein said accessing an electronic calendar capable of storing a plurality of event entries at a plurality of times includes accessing an electronic calendar capable of storing a plurality of event entries at a plurality of times, the electronic calendar being configured to store broadcast event entries related to scheduled broadcast programs and user-generated event entries related to scheduled non-broadcast-related events for at least one user.

40. (Currently Amended) The apparatus of Claim 42-45, wherein said data storage device stores an electronic calendar capable of storing a plurality of event entries at a plurality of times, the electronic calendar configured to store broadcast event entries related to scheduled broadcast programs and user-generated event entries related to scheduled non-broadcast-related events for at least one user.

41. (New) The method of claim 1, wherein said selecting at least one of the plurality of scheduled broadcast programs in the accessed electronic programming guide includes selecting at least one of the plurality of scheduled broadcast programs in the accessed electronic programming guide, and thereby transferring information, associated with the at least one selected broadcast program, to an electronic calendar as at least one new broadcast event entry, each new broadcast event entry containing the information for a corresponding selected broadcast program and being stored in the electronic calendar at a time corresponding to a broadcast time of the respective at least one selected broadcast program.

42. (New) The apparatus of Claim 15, wherein said accessing component is a second accessing component, and further comprising:

a data storage device in which is stored an electronic calendar capable of storing a plurality of event entries at a plurality of times;

a first accessing component configured to access the electronic calendar stored in said data storage device,

wherein said processor is coupled to said first and second accessing components and said data storage device, said processor being further configured, upon receipt of a control signal, for selecting at least one scheduled program in the accessed electronic programming guide, and thereby transferring information associated with the at least one selected broadcast program from the electronic programming guide to the accessed electronic calendar as at least one new broadcast event entry, the at least one new broadcast event entry containing the information for the selected broadcast program and being stored in the electronic calendar stored in said data storage device at a time corresponding to a broadcast time of the at least one selected broadcast program.

43. (New) The apparatus of Claim 25, wherein said accessing means is second accessing means, and further comprising:

data storage means for storing an electronic calendar capable of storing a plurality of event entries at a plurality of times;

first accessing means for accessing the electronic calendar stored in said data storage means;

wherein said processing means is coupled to said first and second accessing means and said data storage means for selecting, upon receipt of a control signal at least one scheduled program in the accessed electronic programming guide, and thereby transferring information associated with the at least one selected broadcast program from the electronic programming guide to the accessed electronic calendar as a new broadcast event entry, the new broadcast event entry containing the information for the selected broadcast program and being stored in the electronic calendar stored in said data storage means at a time corresponding to a broadcast time of the selected broadcast program.
